

**Participation of representatives of the State Statistical Committee in the training course organized in Kiev on the theme of “Implementation of Indicators of Foreign Trade Statistics by the Eurotrace software”.**

Representatives of the State Statistical Committee of the Republic of Azerbaijan Deputy Head of the Department of Trade Statistics Aida Ibrahimova and Engineer-programmer of the Application of Database Technologies Division of the Main Computing Centre of the SSC of Azerbaijan Sevinj Hajiyeva were participated in the second stage of training course formed on the theme of “Implementation of Indicators of Foreign Trade Statistics by the Eurotrace software” on 12-16 March, 2012 in Ukraine, Kiev organized by the Eurostat.

Main purpose of second training course was extending general knowledge obtained from first training on Eurotrace and use of it in a practical form.

In the training course downloading of software, preparation of vocabularies and classifications (country, commodity, unit of measure, regime of customs and etc.), creating connections between them and putting the indicators on customs to the database, lay the errors and edition, forming of exit data, creation of supervision algorithm for software, receiving the results, constitute system on introduction and exit

indicators and its management and etc. processes were widely explained and all operations in a sequence were carried out by the participations in a private form.

The participants were informed about the implementation of record on foreign trade statistics by the representatives of participant country and discussed the problems on it. It was noted that, the countries supporting ISO 10646 (Unicode) format, as well as, Azerbaijan have problems on application of this program. So, there has been still implementing operations on qualitative transfer of extensive classifications, text parts of base indicators to Eurotrace system and it is planned elimination of the difficulties in the nearest future.

At the moment Georgia carrying out its record on foreign trade statistics on the base of MS ACCESS and planning to the application of Eurotrace after resolving problems on copying the text information to this system. Other participant countries (not supporting ISO 10646 (Unicode) format) are used first 2000 version of Eurotrace software and transfer to the new version of this program is in the level of preparation.
